# Start here

**Make Money While You Sleep (Using AI and Automations)**
Reader resources · J. F. Carpio

Use this **completed teaching example** before adapting the process to your own topic. It is not a record of achieved sales or income.

## Open the workbook

Open **meal-planning-workbook.pdf** in this same examples folder. Its first pages are blank worksheets; the later pages show a completed example. Type into the fields and save a copy, or print them.

Work through the **pantry check, weekly plan and shopping list**. Leave room for the evening when plans change. The example makes no nutrition, health or savings promise.

## Read the product brief

**Product:** Weekly Meal Planning Kit

**Audience:** busy households planning meals
**Problem:** deciding what to cook before shopping

**Source:** The kit contains a weekly meal worksheet, a pantry check, a shopping list and a flexible evening. Start with meals the household already knows. Check ingredients already available. Plan meals, list missing ingredients and quantities, and leave one evening flexible. No nutrition or savings claim is made.

The **source is the reference** for the demonstration. Check that every instruction agrees with the worksheet. You can complete this route in your normal writing and design tools; no n8n, AI account or programming is required.

# See the demonstration

## Short article

Start with the meals already in your household rotation. Check what is in the kitchen, choose meals for the week, and write one shopping list. Leave room for the evening when plans change.

## Spoken script

Start with meals you already know. Check the ingredients you have. Choose meals for the week, write one shopping list, and leave a flexible evening. The worksheet helps you make those decisions before you shop.

## Three scenes

**1. Check what you have**
Look in the fridge and pantry before adding items to your list.

**2. Choose familiar meals**
Use your household rotation and leave one flexible evening.

**3. Write one shopping list**
List the missing ingredients and check quantities before shopping.

## Caption

Plan before you shop. Try the meal-planning worksheet with meals you already know.

**Review before sharing:** Does the demonstration match the workbook? Can someone use the instructions without buying something else? The supplied video example is silent; review any narration and captions you add yourself.

# Build your own example

Choose a **problem you understand**. Write who needs help, when they need it, and what they should be able to finish after using your product.

Use **templates/product-brief.md** and **templates/review-checklist.md** as writing prompts. A normal text editor can open them. You can also copy their questions into your preferred writing tool.

Make a **completed example and a blank worksheet**. Ask someone in the intended audience to follow the instructions without your explanation. Revise the step where they get stuck.

## Check the money

The example in **unit-economics.csv** assumes a $20 price, a 10% fee plus $0.50, $1 of variable costs and $4 to acquire a buyer. That leaves **$12.50 contribution** before taxes and other omitted costs. With $250 in setup costs, twenty sales at that contribution recover setup.

These are **illustrative assumptions**, not a quotation from a platform or a sales forecast. Use your actual fees and records. A spreadsheet can open the CSV, or you can do the calculation on paper.

## Keep control of your work

Keep a **saved copy** of your source, finished product and demonstration. Use the diagrams in diagrams/ to inspect the process. Open **ADAPT-WITH-YOUR-AI.md** in the main folder for a copyable prompt: your AI can adapt the starting designs to your own product and tools. Read docs/QUICKSTART.md for the supplied technical design; verify your adapted version before using it.

A **complete first transaction** means a buyer understands the offer, receives the promised files and can use them. Review checkout and delivery through your chosen platform's permitted test route before accepting orders.
